TEAM CONTRACT
==
enguyen-nconsul-spefley

Goals

Do as well as possible. We'd all like to get an A and to walk away from this project with a better understanding of what it means to work on a team. The biggest obstacle we'll face is being able to meet up to check on each other and then to make sure our code interfaces well with each other's individual contributions. The way we've agreed is that if one member has something pop up where they truly can't perform all of the tasks given to them, the other two will try to help pick up the work.

Meeting Norms

We will use inclass time to talk logistics. We will talk about what we have accomplished since the last meeting and plan future meetings, and division of labor. Most times we'll hold meetings at Simmons in the evening or during weekends when we're all slightly less busy with classes and such.

Standing meetings:
    Wed 9 5:00 - late-ish

Work Norms

We will record who is responsible for which tasks in this document.
Any problems that occur (one member slacking, deciding group deadlines, etc) will be discussed among all members until a resolution is found. As of the last major discussion the tasks have been distributed as follows:

ANTLR parsing – nconsul
Physics and gadgets – enguyen
Multithreaded and server/client aspects – spefley

Tests for each section will be handled by listed peoples. Work will be reviewed by other members midway through the second week of this project.
